

A photograph showing a piglet in a farrowing crate. The piglet is standing on a metal grate floor, looking towards the camera. A larger pig, presumably the mother, is partially visible in the foreground, with its head and front legs in view. The crate is made of metal bars, and the background shows other similar crates in a row. A white text box is overlaid in the upper right corner of the image.

Piglets stay in Farrowing
Crates until they are 21
days old

Piglets are then weaned from their mothers and taken to a nursery

Piglets are here for anywhere between 42 to 56 days

Pigs are then transported from the nursery to the finisher building

Pigs complete their growing, which takes between 115 to 120 days

Pigs are transported to a meat processing facility

Pigs are harvested and processed for consumption

The pork is put into packaging

The pork products are transported in a refrigerated truck to their retail locations.

HyVee
