Why Agriculture?

Teaching about agriculture in Iowa is an ideal way for students to learn what their state is all about and provide real-life connections to science, math, and social studies concepts. Agriculture is a topic that students can easily connect to because they encounter it often. Who doesn’t enjoy talking about food? Nearly everything we eat, wear, use -- even the fuel that powers the cars and buses we ride in -- comes from plants and animals grown on farms. Agriculture provides perfect real-world connections to STEM and makes learning relevant to students.

Helping students understand the farm-to-table connection is important in our consumer-driven society. Teaching students to be agriculturally literate connects their learning to everyday life. That is what the Iowa Ag Today series is all about.

About Iowa Ag Today

Iowa Ag Today is a great supplement to your science, social studies, and language arts curriculum. Each issue is chock-full of discussion topics, new vocabulary, and other materials that you can easily integrate into lessons. Major highlights of each issue include:

Issue 1: Agriculture is Everywhere
- What is agriculture?
- Iowa agriculture crops, livestock, & products
- Agricultural careers

Issue 2: Food, Health & Lifestyle
- Nutrition
- Food safety

Issue 3: Agriculture and the Environment
- Natural resource management
- Agriculture in global ecosystems

Issue 4: Culture, Society, Economy & Geography
- Agriculture and the development of civilizations
- Iowa’s agriculture innovators
- Geography, global trade and economics

Issue 5: Science, Technology, Engineering & Math
- Science and technology to increase food production
- Safe, healthy, abundant food
- Sustainable systems for a growing population

Issue 6: Plants & Animals for Food, Fiber & Energy
- Domestication of plants and animals
- Renewable and non-renewable resources
- Plant and animal needs
- Biotechnology

Integration Ideas

- Construct a graph or pie-chart showing the pounds of food an average American eats per year. (pg. 6)
- Convert the pounds of one food type to a fraction or percent of the total pounds of food. (page 6)
- Identify the STEM involved in producing pork. (pg. 4 & 5)
- Discuss how pork production in Iowa impacts local and global economies. (pg. 4 & 5).
- Research the market price of pork vs. the price of pork in the grocery store over time. Explain why both prices rise or fall. (pg. 4 & 5).
- Ask students to annotate or make “thinking tracks” in the margins as they read Ag Today jotting down thoughts and questions. Then discuss their thinking tracks in small groups.
- Compare nutrition labels of three foods and explain which is the healthiest choice using vocabulary introduced in this issue.

Glossary
Some words in Ag Today may be unfamiliar to your students. These words often appear in bold type. Many are defined in the articles. Words you might wish to review with your students after reading the magazine are: dairy farm (pg. 1), serving, foodborne illness, cross-contamination (pg. 2), carbohydrates, protein, fats, vitamins, minerals (pg. 3), predators, cured, marinated, distribution centers, (pgs. 4-5), allergens (pg. 6), calories (pg. 7), domesticated, culture, sushi, and Mediterranean diet (pg. 8).

Discussion Prompters
1. Cover (Food for an active lifestyle)
   - What types of foods are grown or produced in different parts of the country? Why is that? (Strawberries from Florida, oranges from California, corn from Iowa. Each part of the country has different climate, soil, and resources.)
   - Why should we eat a lot of different kinds of foods? (Different kinds of foods provide different nutrients for our body. For example, dairy is a good source of calcium and fruits are a good source of vitamins.)

Student Page 2 (Serving Size and Food Safety)
1. Describe what a serving of food is. Why is it important? (A serving is the amount of food recommended. It is important to not over eat.)
   - What are some examples of serving size? (A serving of pork is 3 ounces. A serving of vegetables is ½ cup. A serving of bread is 1 slice. A serving of milk is 1 cup.)
2. What are some ways to keep food safe? (Wash your hands, wash preparation surfaces, cook to recommended temperature, use clean utensils.)
3. What are some other careers in food preparation and food service? (Chef, food scientist, baker, butcher, waiter, hostess, dishwasher, sous chef.)

Student Page 3 (Nutrition)
1. What are the five essential nutrients that the body needs? (carbohydrates, protein, fats, vitamins, and minerals)
   - Describe what different nutrients do for our bodies. (Carbs give us energy, protein builds tissue, fats help us absorb vitamins, vitamins help your body function, and minerals help with things like keeping bones strong)
2. What other careers are available in food nutrition? (food chemist, meat scientist, nurse, health educator, food sales representative.)
3. Many pigs are raised in the same states that raise a lot of corn and soybeans. Why is that? (Two primary components of a pig’s diet are corn that provides carbohydrates and soybeans that provide protein. Less transportation of the feed means more efficient production.)
4. Why are pigs raised indoors? (Raising pigs in barns protects them from weather and predators. They have sensitive skin that can be sunburnt in the summer and little hair to keep them warm in the winter. They don’t have strong defenses to ward off predators like coyotes. Even birds of prey like eagles could take the baby piglets.)

Show what you know - Key
1. They give us energy and keep our essential body functions working correctly
2. True – they are rich in protein and fat
3. Weather and predators
4. B. 145 degrees Fahrenheit
5. C. Iowa
6. Don’t spook animals, don’t play with chemicals
7. 2,870 divided by 2 = 1,435
8. Vitamin C comes from oranges, calcium comes from milk
9. D. All of these
Show what you know!

Take this short quiz before you read Ag Today, then again after reading the magazine. See the improvement!

1. Explain why essential nutrients like carbohydrates, protein, fats, vitamins and minerals are all important parts of a healthy diet.

2. Insects are eaten in some cultures as food. Circle one: True False Explain why you think this.

3. Most pigs in Iowa are raised in barns. This protects them from _______________________ and ____________________.

4. What internal temperature should pork be cooked to kill potential bacteria?
   a. 100 degrees Fahrenheit
   b. 145 degrees Fahrenheit
   c. 165 degrees Fahrenheit

5. Which of the following states is the top pork producing state?
   a. Illinois
   b. Florida
   c. Iowa

6. One way to stay safe on farms is to wear the appropriate clothing like gloves, hats, and long pants. What is another way you can stay safe on a farm? Explain.

7. For some people nearly half of their calories come from grain! If you ate 2,870 calories each day how many calories would come from grains like bread and rice? Show your thinking process.

8. Describe one vitamin or mineral we need in our diet and where it comes from.

9. Many people work with pigs in their career. Which of the following people work with pigs?
   a. Veterinarian  b. Pork Buyer  c. Farm Manager  d. All of these
What do you eat?

Record everything you eat for one day. Be sure to include breakfast, lunch, dinner and all snacks. Then, calculate how many servings of fruits, vegetables, protein, grains and dairy using the key below.

- 1 serving of fruit = 1/2 cup fruit or 1 whole apple, banana, or orange;
- 1 serving of vegetables = ½ cup cooked vegetables or 1 cup raw leafy greens
- 1 serving of protein = 1 tablespoon peanut butter, 1 egg, or 2-3 ounces meat
- 1 serving of grains = 1 slice bread, waffle or pancake, ½ cup cooked rice or pasta, or 1 cup cereal
- 1 serving of dairy = 1 cup milk or yogurt or 1 ounce cheese

Create a bar graph of what you ate by coloring one box for every serving of food you ate in the grid below.
